(a) Laboratory · 19 LSCC soils

In each outer training set, an inner 5-fold split by soil chooses A2 or A4; the outer test soil (white) is never seen.

(b) Orbital FeO · 49 returned-sample sites

Metric: per-soil MAE (fractions averaged within a soil, then over 19 soils) · paired Wilcoxon signed-rank tests with Holm correction · bootstrap CIs over soils. P1 follows the published protocol of Fernández-Díaz et al.; P2 is the spatial leave-one-landing-site-out test.
